

# ODYSSEY WATER TRANSFER SYSTEM

## SKID MOUNTED HIGH PRESSURE/HIGH VOLUME WATER TRANSFER PUMP

Total Oilfield Rentals LP offers a solution to your long range water transfer operations. Our Odyssey 200 & Odyssey 95 pumping systems, in conjunction with your water handling infrastructure, are a great alternative to trucking. Total Oilfield Rentals provides a full turnkey solution, with a fully trained crew to deploy, run and maintain packages during water operations at your designated site.

**Odyssey 200** – Utilizes a 200hp Caterpillar natural gas engine couple with a Reda centrifugal pump designed to flow up to 65m<sup>3</sup>/hr of source or flow back water at 5860kPa.

**Odyssey 90** – Utilizes a 95hp Caterpillar natural gas engine couple with a Reda centrifugal pump designed to flow up to 30m<sup>3</sup>/hr of source or flow back water at 4960kPa.

### Applications

- Source & Flow Back water transfer
- Waste water handling/disposal
- Hydrocarbon transfer and handling
- Measurement for water cut and flow reporting

### Product Options

- Integral power generation
- Integral filtration
- Remote site capable operations
- PLC control systems & VFD's
- Engine, natural gas, diesel or propane

### Benefits

- Reduce/eliminate trucking transport costs
- Reduce noise, emissions & road maintenance cost
- Reduce resident impact
- Create a faster movement of water resources, gained efficiencies in completion operations. Allow for a faster set-up and operations of pump
